EE4620 Spectral Domain Methods in EM

Lecture: Matlab Session on Artificial Dielectrics

Dr. Daniele CavalloAssistant Professor

Faculty: Electrical Engineering, Mathematics and Computer Science

Department: Microelectronics

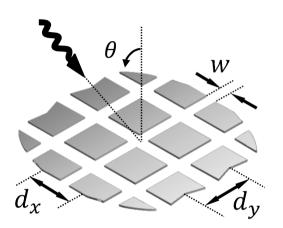

Group: Terahertz Sensing
Building 36, Room: LB 01.450
Mekelweg 4, 2628CD Delft

T+31 (0) 15 27 89538 E <u>D.Cavallo@tudelft.nl</u> http://terahertz.tudelft.nl

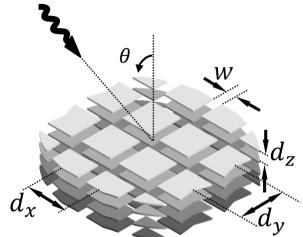

Implement the reflection and transmission coefficient of a plane wave impinging on

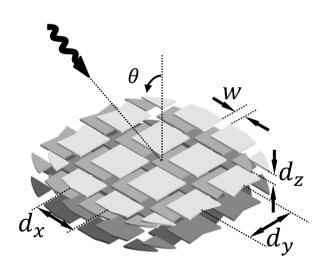

1. Single layer of sub-wavelength patches

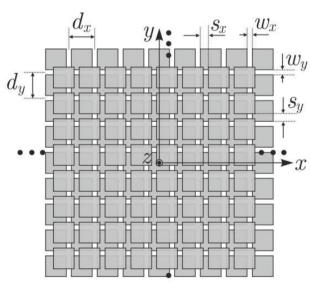

2. N-layer artificial dielectric (aligned)

3. N-layer artificial dielectric (alternate shift)

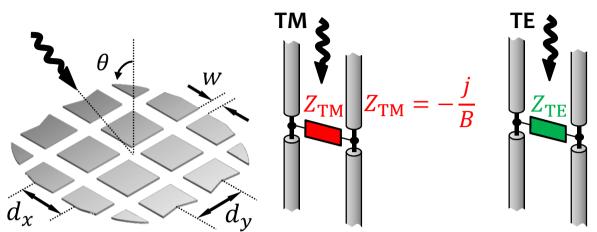

Single layer of sub-wavelength patches

Susceptance

$$B \approx \frac{\omega \varepsilon_0 d_y}{\pi} \sum_{m \neq 0} \frac{\left| \operatorname{sinc}(\pi m w / d_y) \right|^2}{|m|}$$

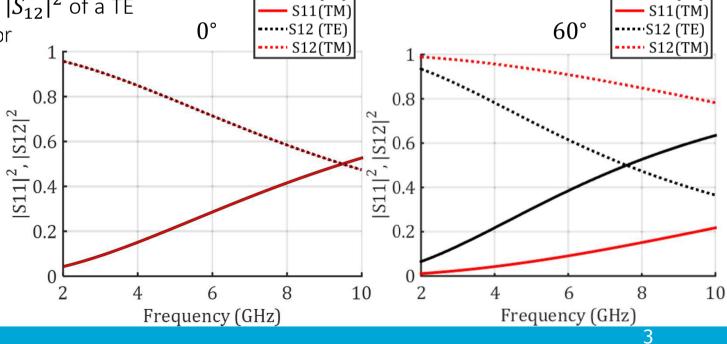

S11 (TE)

$$Z_{\text{TE}} = -\frac{j}{B} \frac{1}{1 - \frac{\sin^2 \theta}{2}}$$

1. Plot the reflection and transmission coefficients $|S_{11}|^2$ and $|S_{12}|^2$ of a TE and TM plane waves for

- Normal incidence
- Incidence at 60°
- Parameters Freq. range: 2-10 GHz $w=0.01\lambda_0$ $d_x=d_y=0.2\lambda_0$ λ_0 wavelength at 10 GHz

·S11 (TE)

Reminder: ABCD Matrix, S-Matrix

$$\begin{bmatrix} A & B \\ C & D \end{bmatrix}$$

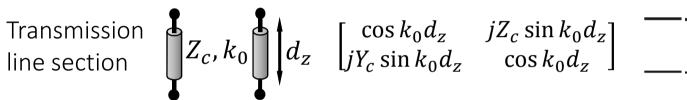

$$\begin{bmatrix} S_{11} & S_{12} \\ S_{21} & S_{22} \end{bmatrix}$$

Shunt impedance

$$Z = 1/Y$$

$$\begin{bmatrix} 1 & 0 \\ Y & 1 \end{bmatrix}$$

$$S_{11} = \frac{-YZ_0}{2 + YZ_0}, \ S_{12} = \frac{2}{2 + YZ_0}$$

$$\begin{bmatrix} \cos k_0 d_z \\ j Y_c \sin k_0 d_z \end{bmatrix}$$

$$jZ_c \sin k_0 d_z \\
 \cos k_0 d_z$$

General conversion

ABCD

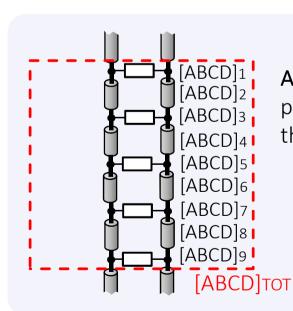

$$S_{11} = \frac{A + B/Z_0 - CZ_0 - D}{A + B/Z_0 + CZ_0 + D}$$

$$S_{12} = \frac{2(AD - BC)}{A + B/Z_0 + CZ_0 + D}$$

$$S_{21} = \frac{2}{A + B/Z_0 + CZ_0 + D}$$

$$S_{22} = \frac{-A + B/Z_0 - CZ_0 + D}{A + B/Z_0 + CZ_0 + D}$$

 Z_0 : normalization impedance

Advantage: total ABCD matrix is product of the ABCD matrixes of the single components

$$[ABCD]TOT = \prod_{i=1}^{9} [ABCD]i$$

N-layer artificial dielectric (aligned)

Susceptance

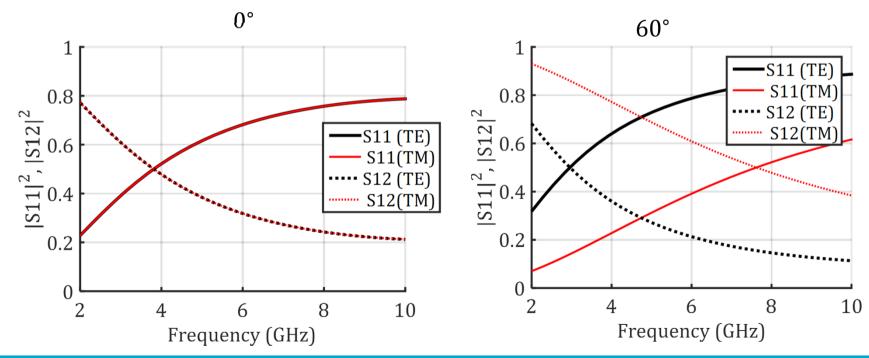

$$B_{\infty} \approx \frac{\omega \varepsilon_0 d_y}{\pi} \sum_{m \neq 0} \frac{\left| \operatorname{sinc}(\pi m w / d_y) \right|^2}{|m|} \times j \tan \left(\frac{-j\pi |m| d_z}{d_y} \right)$$

$$B_{\text{semi}-\infty} \approx \frac{\omega \varepsilon_0 d_y}{\pi} \sum_{m \neq 0} \frac{\left| \text{sinc}(\pi m w / d_y) \right|^2}{|m|} \times \left(\frac{1}{2} + \frac{j}{2} \tan \left(\frac{-j\pi |m| d_z}{d_y} \right) \right)$$

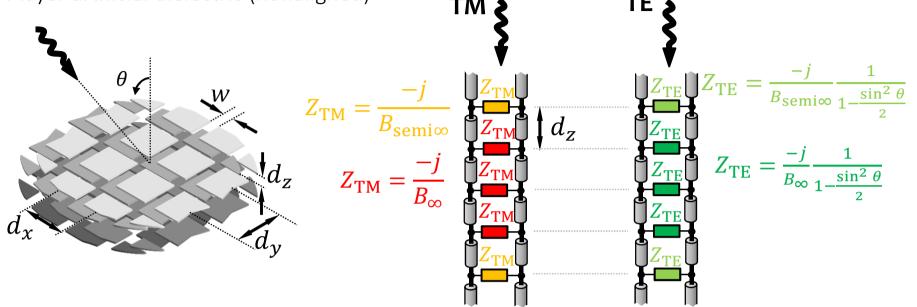

- 2. Plot the reflection and transmission coefficients $|S_{11}|^2$ and $|S_{12}|^2$ of a TE and TM plane waves for
- Normal incidence
- Incidence at 60°

- Parameters N=5Freq. range: 2-10 GHz $w=0.01\lambda_0$ $d_z=0.01\lambda_0$ $d_z=d_y=0.2\lambda_0$

 λ_0 wavelength at $10~\mathrm{GHz}$

N-layer artificial dielectric (nonaligned)

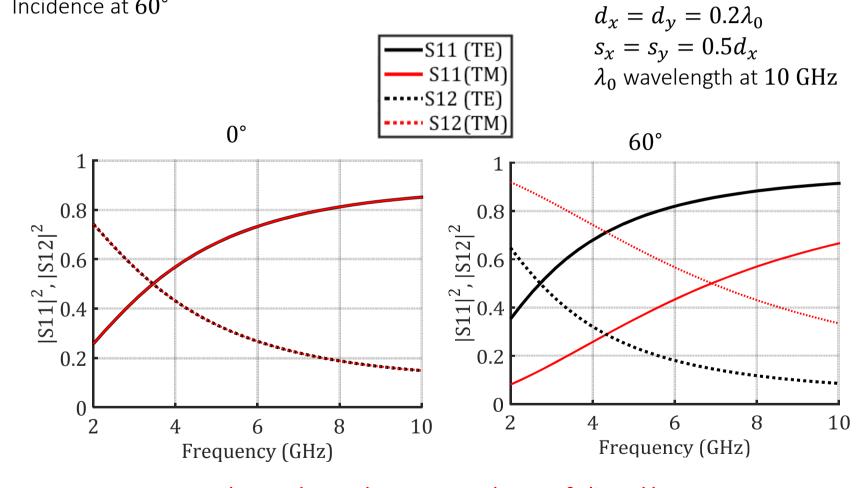

Susceptance

$$B_{\infty} \approx \frac{k_0}{\zeta_0} \frac{d_y}{\pi} \sum_{m \neq 0} \frac{\left| \operatorname{sinc}(\pi m w_x / d_y) \right|^2}{|m|} \left(-j \cot \left(\frac{-j2\pi |m| d_z}{d_y} \right) + j e^{j2\pi m s_y / d_y} \csc \left(\frac{-j2\pi |m| d_z}{d_y} \right) \right)$$

$$B_{\text{semi}\infty} \approx \frac{k_0}{\zeta_0} \frac{d_y}{\pi} \sum_{m \neq 0} \frac{\left| \text{sinc}\left(\frac{\pi m w}{d_y}\right) \right|^2}{|m|} \left(\frac{1}{2} - \frac{j}{2} \cot\left(\frac{-j2\pi |m| d_z}{d_y}\right) + \frac{j}{2} e^{j2\pi m \frac{S_y}{d_y}} \csc\left(\frac{-j2\pi |m| d_z}{d_y}\right) \right)$$

- 3. Plot the reflection and transmission coefficients $|S_{11}|^2$ and $|S_{12}|^2$ of a TE and TM plane waves for
- Normal incidence
- Incidence at 60°

Behaves almost the same as 5 layers of aligned layers

Parameters

 $w = 0.01\lambda_0$

 $d_z = 0.02\lambda_0$

Freq. range: 2-10 GHz

N=2
